Assignment-3

2303A51672

Batch- 23

Indirect Prompt Injection and RAG Context Risks

Scenario: An LLM application retrieves external documents that may contain untrusted instructions.

Task:

- Create a controlled test document containing benign adversarial instructions.
- Run the application with retrieval enabled.
- Observe whether retrieved content changes the model behavior unexpectedly.
- Compare trusted-context and untrusted-context responses.
- Identify the trust boundary between data and instructions.
- Document retrieval, prompt and output evidence.
- Discuss vector-store and document-provenance controls.

Focus: Understanding how external content can influence an LLM application.

Output:
