Assignment-4

2303A51672

Batch- 23

Prompt Injection Defense and Security Assessment

Scenario: The team must improve the playground's resistance to controlled injection tests.

Task:

- Apply approved defenses such as instruction/data separation, tool permission limits, output validation, allowlists or human confirmation.
- Repeat the same controlled test suite.
- Compare attack success before and after defense.
- Document false positives or loss of useful behavior, if any.
- Prepare a prompt-injection risk register with threat, impact, control and evidence.
- Conclude whether the application is ready for the next security review.

Focus: Evaluating LLM defenses through repeatable controlled testing.

Output:
